

IN THE WOODLAND

- food chains

Science in the Environment
Key Stage 2
Worksheet

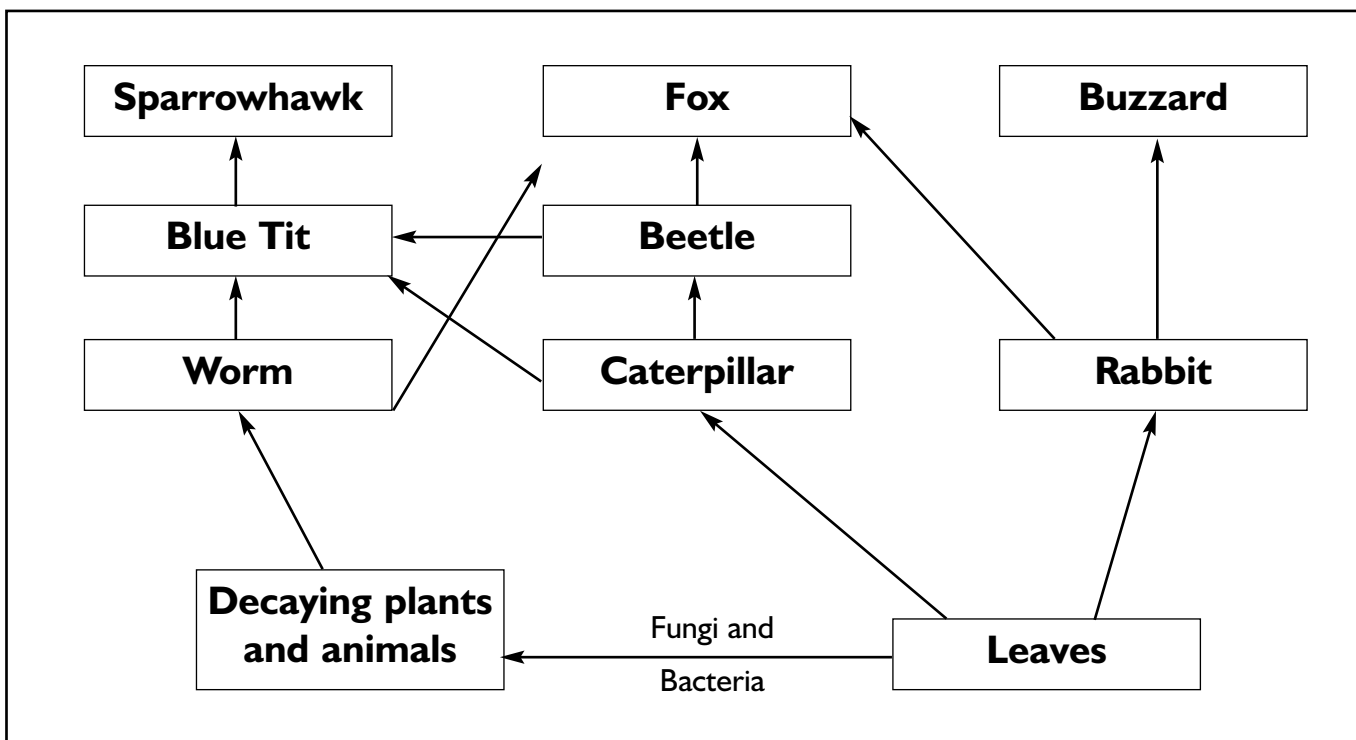

Everything needs food to survive. All plants and animals, whether alive or dead, provide food for some other organism in the woodland. Here is a typical food chain.

Sun and rain ➔ **plants** ➔ **insects** ➔ **birds** ➔ **foxes**

1. What is at the start of all food chains?

2. Green plants are called 'producers'. Do you know what they produce?

In a habitat, an animal will feed on many different organisms, not just one. Many food chains together form a food web. Here is a food web for the woodland.

3. Name two animals competing for the same food in the web.
